Video Health Monitoring System

Argia is a health monitoring system dedicated to monitoring and reporting on the health of a highly integrated system, using the available communication network. It requests performance statuses from the subsystems, or it calculates the system status from the available data. It is specifically designed for video subsystems, but can also monitor other network devices.

Features include:

- Camera connectivity
- Camera position
- Camera clarity (dirt on lens)
- Camera frame rate
- Camera lighting changes
- Network Connectivity

Typical applications include:

- Security Control Systems
- Laboratories
- Industrial Facilities
- National Key Points
- Government Institutions
- Large Corporates
- Military Applications
