nobilis

Custom Video Analytics Platform

Nobilis offers a unique framework and platform to allow custom video analytics to be developed and deployed. Many cameras and video management suites offer video analytics, but because they are developed for generic applications, they may not suit specific requirements. Nobilis fills this gap in providing a platform where special video analytic needs can be catered for.

- Object Analyses
- Behavioural Analyses
- Object Recognition
- Facial Recognition
- ANPR
- Object removal
- Trespassing
- Fire Detection
- Number recognition
- Traffic analyses
- Thermal detection
- Tracking
- Stabilisation
- Long Range Detection
- Custom solutions

Implementation is usually done in conjunction with the

Phorcas Video Monitoring and Information Management platform

Long Range Thermal Detection, especially designed for warmer environments

Object tracking using a Pan-Tilt head, or simply tracking an object inside an image

Vehicle identification, number plate recognition, speed, behaviour and other characteristics

Digital stabilisation

Object identification

Custom, specialised motion detection

Fire detection
